(1) can be used in gene therapy. The polynucleotides, polypeptides, antibodies and compositions of the present invention can be used for treating and diagnosing diseases, drug screening assays and monitoring of effects during drug clinical trials. The polynucleotides are useful for expressing and detecting Alloicoccus otitidis. The present sequence encodes an Alloicoccus otitidis antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1212 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       protein from the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ś
                         CC Alloiococcus otitidis genomic DNA, which encodes an antigenic protein.
CC Alloiococcus otitidis is a Gram-positive bacterium. Also described: (1)
CC Alloiococcus otitidis is a Gram-positive bacterium. Also described: (1)
CC Alloiococcus otitidis is a Gram-positive bacterium. Also described: (1)
CC Alloiococcus otitidis is a Gram-positive bacterium. Also described: (1)
CC Alloiococcus otitidis is encoded by the polynucleotide (1); (2) an encoded protein comprising the novel isolated polynucleotide (1); (2) and complement, degenerate variant or fragment; (3) a genetically engineered composition comprising the polypeptide of (1); (5) an immunogenic composition comprising the polypeptide of (1); (5) an immunogenic composition or fragment; (6) a pharmaceutical composition comprising the compression vector; (6) a pharmaceutical composition comprising the compression the polypeptides of (1), their biological equivalent or fragment; (8) communising against Alloiococcus otitidis by administering to a host the communising against Alloiococcus otitidis by administering to a host the containing the novel polynuclectide, its degenerate variant or fragment; (7) and (11) producing a polypeptide by culturing the containing the novel polynuclectide, its degenerate variant or fragment; (8) containing the novel polynuclectide, and (11) producing a polypeptide by culturing the containing the culture. (1) can be used in gene therapy. The polynucleotides are useful for expressing and detecting Alloiococcus ortitidis. The present sequence encodes an Alloiococcus ortitidis antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ADB06119 standard; DNA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             29-NOV-2001;

The present invention describes an isolated polynucleotide (I) of C Alloiococcus otitidis genomic DNA, which encodes an antigenic protein. C Alloiococcus otitidis is a Gram-positive bacterium. Also described: (1) CC an isolated polypeptide that is encoded by the polynucleotide (I); (2) an expression vector comprising the novel isolated polynucleotide (I); its CC complement, degenerate variant or fragment; (3) a genetically engineered thost cell, transformed or infected with the vector of (2); (4) an antibody specific for the polypeptide of (1); (5) an immunogenic composition comprising the polypeptide that is comprised in the expression vector; (6) a pharmaceutical composition comprised in the polypeptide of (1) and a carrier; (7) a protein chip comprising the polypeptide of (1) and a carrier; (7) a protein chip comprising an array of the polypeptides of (1), their biological equivalent or fragment; (8) immunising against Alloiococcus otitidis by administering to a host the containing the novel polynucleotide padministering to a host the containing the novel polynucleotide, its degenerate variant or fragment; (7) and the antibody of (4); and (11) producing a polypeptide by culturing the polynucleotides, polypeptides, antibodies and compositions of the present invention can be used for treating and diagnosing diseases, drug screening assays and monitoring of effects during and palloiococcus otitidis. The present sequence encodes an Alloiococcus otitidis antigen protein from the present invention.

New Alloiococcus otitidis polynucleotides and potreating and diagnosing diseases, drug screening effects during drug clinical trials. polypeptides, useful for ing assays and monitoring of.

SEQ ID NO 6651; 1019pp; English

The present invention describes an isolated polynucleotide (I) of CC Alloiococcus otitidis genomic DNA, which encodes an antigenic protein. CC Alloiococcus otitidis is a Gram-positive bacterium. Also described: (1) CC an isolated polypeptide that is encoded by the polynucleotide (I); (2) an isolated polypeptide that is encoded by the polynucleotide (I); (2) an ccomplement, degenerate variant or fragment; (3) a genetically engineered thost cell, transforted or infected with the vector of (2); (4) an antibody specific for the polypeptide of (1); (5) an immunogenic composition comprising the polypeptide, its complement, biological equivalent or fragment, or the polypeptide of (1); (5) an immunogenic composition comprising the polypeptide, its complement, biological equivalent or fragment; (6) a pharmaceutical composition comprising the compression vector; (6) a pharmaceutical composition comprising an array of the polypeptides of (1), their biological equivalent or fragment; (8) cimmunising against Alloiococcus ortitidis by administering to a host the containing the novel polynucleotide, its degenerate variant or fragment; (7) a protein comprising a container containing the novel polynucleotide, its degenerate variant or fragment; (8) artificial trails polypeptides from the culture. (1) can be used in gene therapy. The copynucleotides polypeptides, antibodies and compositions of the present invention can be used for treating and diagnosing diseases, drug contitidis. The present sequence represents the entire genome of alloiococcus ortitidis. The present sequence represents the entire genome of alloiococcus ortitidis, which is given in the exemplification of the present invention.

                                                                                                                                                                   The present invention relates to nucleic acid sequences (ABQ67188-ABQ71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for treating infections by Listeria, and are useful as immunogens in antitisteria vaccines. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ABQ68713 standard; DNA; 885 BP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New genomic sequences from Listeria species, useful for detection, treatment and prevention of infection, also related polypeptides, antibodies and modulators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antibacterial; Listeria; food contamination; mutational analysis; infection; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Listeria monocytogenes 4b contig DNA sequence #1479.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               29-AUG-2003

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                  42.4
